ANTI-STONE CHIPPING PROTECTIVE FILM
To protect the parts of the bodywork that are most subject to damage or deterioration while driving, an “Anti-stone chipping” film kit is available. The kit contains high-resistance transparent film parts, specially designed and shaped to follow the volumes and style lines of the vehicles. This kit is installed by specialised personnel who after completing the operation, will issue a warranty certificate for the materials used and the work performed, together with information on any special precautions to be taken during future workshop procedures. Partial or full kits are available and the cost of the kit includes installation by specialised personnel. In addition to the complete kit, a protective film kit is available that is applied to the most critical spots (i.e. the wheelhouses, air intakes or tonneau cover). These films are subject to more intense wear and need to be replaced more often compared with protective films applied to the vehicle bodywork.
ANTI-STONE CHIPPING PROTECTIVE FILM
